The Problem

- **Vani Tuition Center currently uses manual and disconnected systems to manage:**
 - Student records
 - Class schedules
 - Payments
 - Achievements & announcements
 - No centralized digital platform

Target Users

Current Practices & Gaps

Practices

- Manual paper-based records
- WhatsApp group for any updates
- Manually search files when any data is required

Gaps

- No centralized system
- No proper admin dashboard
- Poor data security
- No real-time updates

Client Collaboration Evidence

CLIENT COLLABORATION AGREEMENT

To Whom It May Concern,

This letter confirms that Vani Tution Center, has agreed to collaborate with S.Sulakshan SE/2022/043, S.Sathiyabalan SE/2022/008, K.Kavisanah SE/2022/059, K.Abinash SE/2022/047 students of the Faculty of Science, University of Kelaniya, Sri Lanka, for the development of a software-based system as part of their academic System Design Project.

The purpose of this collaboration is to design and develop a **Tuition Center Website and Admin Management Platform** that showcases achievements, manages student and class information, and improves operational efficiency and communication for Vani Tution Center (Grades 1–11).

1. Project Title
Vani Tution Center – Website and Admin Management Platform

2. Background and Problem Statement
At present, Vani Tution Center manages its student information, class schedules, achievements, and announcements through manual or disconnected processes. There is no centralized digital platform to showcase the center's achievements, communicate with students and parents, or efficiently manage administrative data.

As a result, parents and students struggle to find up-to-date information, while the admin team faces difficulties managing records and presenting the center's accomplishments effectively.

To address these issues, there is a need for a professional website combined with an admin panel that enables easy content management, achievement showcasing, and streamlined administrative operations for Grades 1–11.

3. Objectives of the Proposed System
The proposed system aims to provide a professional and informative public-facing website for Vani Tution Center that highlights achievements, staff, subjects offered, and news for Grades 1–11. It will also feature a secure admin panel to manage and update website content, student records, class schedules, and achievement data. In addition, the system will enable easy communication of announcements and events to students and parents. Overall, the proposed solution seeks to enhance the center's digital presence and operational efficiency through a modern, user-friendly platform.

4. Scope of Collaboration
The client agrees to provide relevant information regarding the center's current operations, achievements, class structure, and administrative procedures, and to actively participate in requirement gathering and clarification meetings. They will also review and validate system requirements and design documents and provide constructive feedback on both the prototype and the final solution to ensure the system meets their needs.

The student team agrees to use all client-provided information strictly for academic purposes and to maintain strict confidentiality of any sensitive data. They will provide regular updates on project progress and ensure the client is informed of any significant changes to the agreed project scope throughout the development process.

5. Confidentiality
Any confidential information shared by the client during the project shall be used strictly for academic project purposes and handled with appropriate care. The student team agrees to protect such information from any unauthorized disclosure and ensure it is securely managed throughout the project lifecycle.

No confidential information will be shared with any third parties without prior approval from the client. These confidentiality obligations will remain valid for a period of two (2) years after the completion of the project.

6. Intellectual Property Rights
All software, documentation, system designs, and project deliverables developed under this project shall remain the intellectual property of the student developers and/or the University of Kelaniya.

7. Agreement Duration
This agreement becomes effective on the signing date and remains valid until the academic project is completed and submitted.

Either party may terminate the agreement by providing 14 days' written notice.

8. Confirmation
I hereby confirm that the above project request is genuine and that the proposed solution is required as described.

Client Details
Client Name: Mrs. S. Vanikula.
Designation: Director.
Organization: Vani tution Center.
Contact Number / Email: 0766280615

Signature: S. Vanikula
Official Seal: MRS. S. VANI
Director
Vani Tution Centre
Unimpiral
0766280615
Date: 20/04/2026.

Feasibility Snapshot

Project Uniqueness

This project provides hands-on experience in full-stack development by solving a real-world tuition management problem. It integrates automation and AI-based features to **modernize traditional processes, improving efficiency, communication, and academic tracking through a centralized system.**

Risks & Mitigation

● Risk 1: Changing Requirements

- **Mitigation:** Conduct regular stakeholder meetings and confirm requirements early through documentation.

Risk 2: Time Constraints

- **Mitigation:** Use proper project planning, task prioritization, and milestone tracking.

Risk 3: Technical Issues

- **Mitigation:** Use familiar technologies and perform early prototyping and testing.

The slide features decorative geometric patterns in the corners. The top-left corner has a series of thin, overlapping grey lines forming a wave-like shape. The top-right corner contains a black-outlined diamond with a blue dot inside, a yellow dot, and a yellow triangle. The bottom-left corner shows a black-outlined diamond with a blue dot, a yellow dot, and a yellow triangle. The bottom-right corner has a grey wireframe mesh pattern.

Thank You
